Based on
https://github.com/df8oe/UHSDR/wiki/Windows-10-x64-Compiler-Setup-and-Build-Environment

Summary of https://gnu-mcu-eclipse.github.io/install/ below:

- Overview here: https://gnu-mcu-eclipse.github.io/install/
- Java from here https://www.java.com/en/download/win10.jsp
    - **If you run 64 bit windows make sure to install 64 bit JRE from here
      https://java.com/en/download/manual.jsp**
    - Install and test
- Gnu Arm toolchain from here, Win32 exe
  https://developer.arm.com/open-source/gnu-toolchain/gnu-rm/downloads
    - Execute. Installs in C:\Program Files (x86)\GNU Tools ARM Embedded\7 2017-q4-major
    - See https://gnu-mcu-eclipse.github.io/toolchain/arm/install/
- Download Gnu Arm Windows build tools from here
  https://github.com/gnu-mcu-eclipse/windows-build-tools/releases
    - Copy all .exe files from "bin" directory from downloaded .zip to C:\Program Files
      (x86)\GNU Tools ARM Embedded\7 2017-q4-major\bin
    - See https://gnu-mcu-eclipse.github.io/windows-build-tools/install/
- Install J-Link from here http://www.segger.com/jlink-software.html (If you have J-Link..)
    - See https://gnu-mcu-eclipse.github.io/debug/jlink/install/
    - Download from here https://www.segger.com/downloads/jlink/
    - Will install in C:\Program Files (x86)\SEGGER\JLink_V630d
- Install Git for Windows from here https://git-scm.com/download/win
- Install OpenOCD as explained here
  https://gnu-mcu-eclipse.github.io/blog/2018/01/23/openocd-v0-10-0-7-20180123-released/
    - Install node.js "TLS" from here https://nodejs.org/en/
    - Open Command line window in win10. Enter

```
npm install xpm --global
```

This installs xpm package manager executable

- Open Command line window in win 10. Enter

```
xpm install @gnu-mcu-eclipse/openocd --global
```

to install Gnu MC Eclipse openOCD

- Install Quemu as explained here https://gnu-mcu-eclipse.github.io/qemu/install/
    - Download latest Windows exe from here
      https://github.com/gnu-mcu-eclipse/qemu/releases
    - Will install in C:\Program Files\GNU ARM Eclipse\QEMU\2.8.0-201612271623-dev
- Get latest MCU Eclipse from here
  https://github.com/gnu-mcu-eclipse/org.eclipse.epp.packages/releases/
    - Extract downloaded zip file to c:\ (otherwise path names may become too long)
- Run GNU MCU Eclipse
    - Follow work space preferences "global tool chain path" in
      https://gnu-mcu-eclipse.github.io/eclipse/workspace/preferences/
    - Follow tool chain path management in https://gnu-mcu-eclipse.github.io/toolchain/path/

Install PAckages CMSIS

- See https://gnu-mcu-eclipse.github.io/plugins/packs-manager/
- In Eclipse Help→Install new software, Work with: "GNU MCU Eclipse plug-ins", Click "What is already installed"
  - Check that "GNU MCU C/C++ Packs (Experimental)" are installed, or install them
  - In Eclipse goto C/C++ packs perspective (hover over toolbar icons to find the icon with two boxes in orange yellow)
  - In this perspectiv, above middle window, click on the icon with the two yellow arrows, to update the packages definitions from all repositories
  - If any warnings that certain packages cannot be downloaded please click "ignore" to continue, as long as it does not concern the STMicro packages we are interested in - STM32F7 and STM32H7
  - When finished, in left window, choose STMMicroelectronics
    - Ín left window, click once on STM32F7 series. Then above middle window click yellow box icon to install a local copy of the selected package
    - In left window, do same with STM32H7 series, download a local copy
